Overview

Sixpack is a fitness finance platform inspired by the Bitcoin economy and based on Proof of Physical Activity (POPA), supercharged by Meta-Fi, De-Fi, gamification, and NFT-Fi.

Sixpack is a fitness finance platform through which a circular economy around a virtual mining machine is built, where the mining machine is powered by a unique type of energy called "active energy" with the greater aim of focusing on sustainability and clean energy. On this platform, athletes will literally be in the role of energy supplier and can mint their daily active energy in the form of NFT called "Battery". Batteries are the main source of power, enabling mining machines to mine SIXP and other green tokens and coins. SIXP has created the first NFT marketplace specifically designed for athletes to monetize their fitness data. It uses a dual- burning mechanism through gamification to supercharge its increase in value.
